

Symposium

Ecological implications of large-scale wind energy development on the North Sea

8 juni 2016, Rotterdam

Aanleiding

Natuur & Milieu betrokken bij ontwikkeling "2050: An Energetic Odyssey"

Samenwerking Natuur & Milieu en Stichting De Noordzee op thema Wind op Zee

Stichting De Noordzee gevraagd om ecologische feedback

Vanwege innovatief karakter en grootschaligheid besloten wetenschappers te benaderen

Symposium

ologen uit NL, B, D, VK.

ertise: benthos, zeezoogdieren, vogels, vissen.

ning "2050: An Energetic Odyssey"

tarisatie kansen, bedreigingen, kennisleemten

dbevindingen met input van wetenschappelijke raad

SDN

Energetic Odyssey

50 – An Energetic Odyssey": feiten en claims

25.000 turbines van 10MW worden geïnstalleerd

Windparken bedekken 57.000km²

Alle geplande windparken staan buiten de 12-mijlszone

Een kunstmatig eiland van 6km² wordt aangelegd op of bij de Doggersbank aangelegd.

Energie wordt opgeslagen in de vorm van waterstof

Uitgeproduceerde gasvelden worden voor CO₂ opslag gebruikt

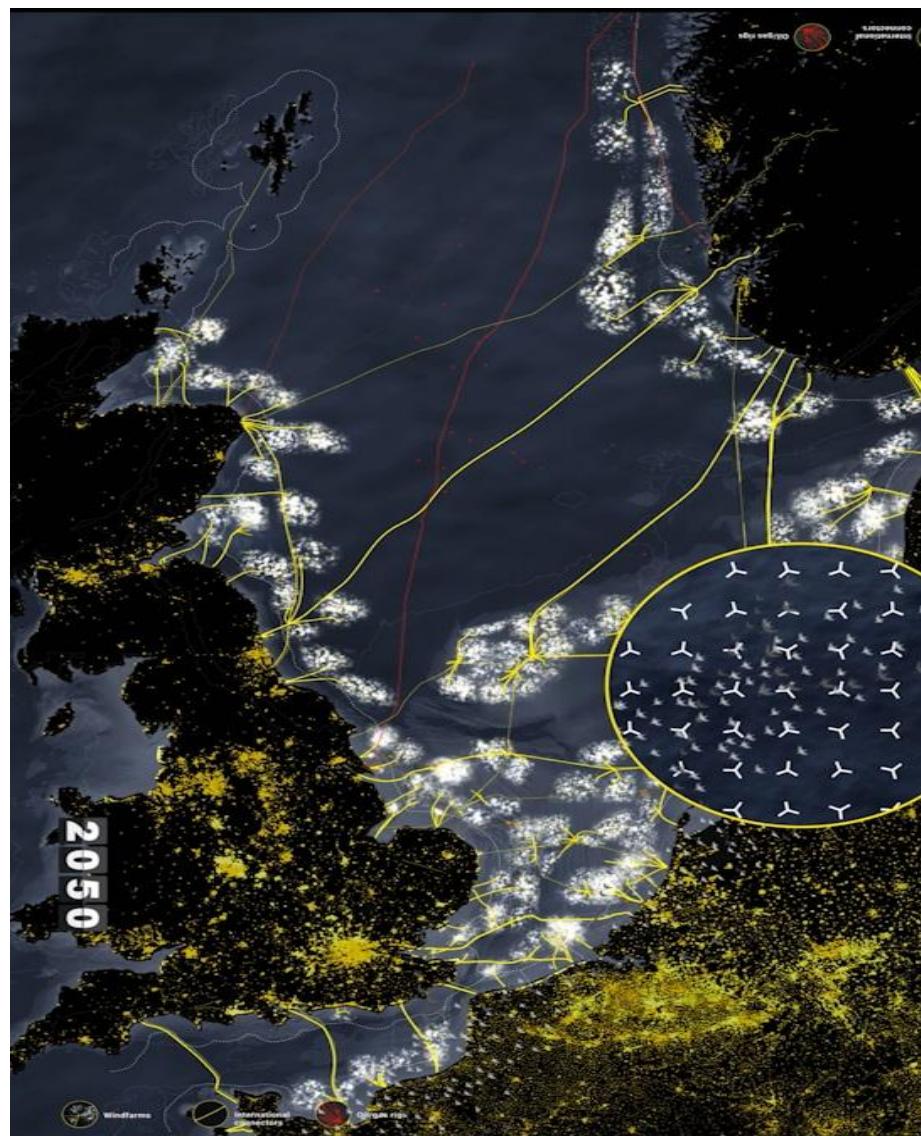

Er wordt rekening gehouden met migratieroutes van vogels

Kunstmatig hard substraat biedt nieuw habitat

Onderwatergeluid wordt gemitigeerd

In windparken worden visserij managementzones gecreëerd

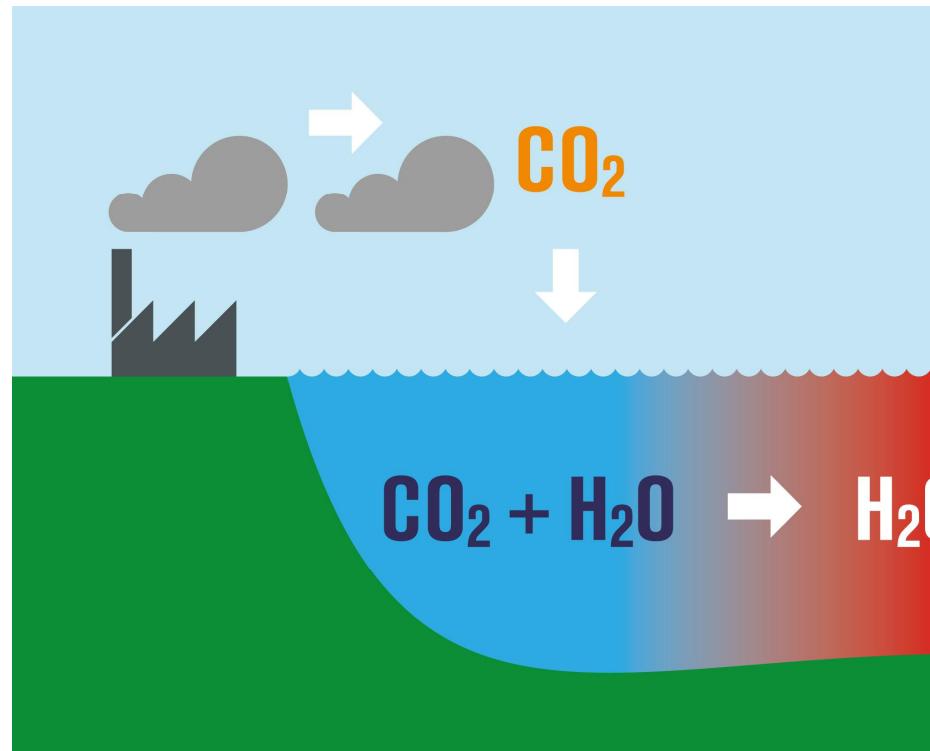

Het beladen van CO₂ uitstoot is noodzakelijk

Oplossing klimaatprobleem

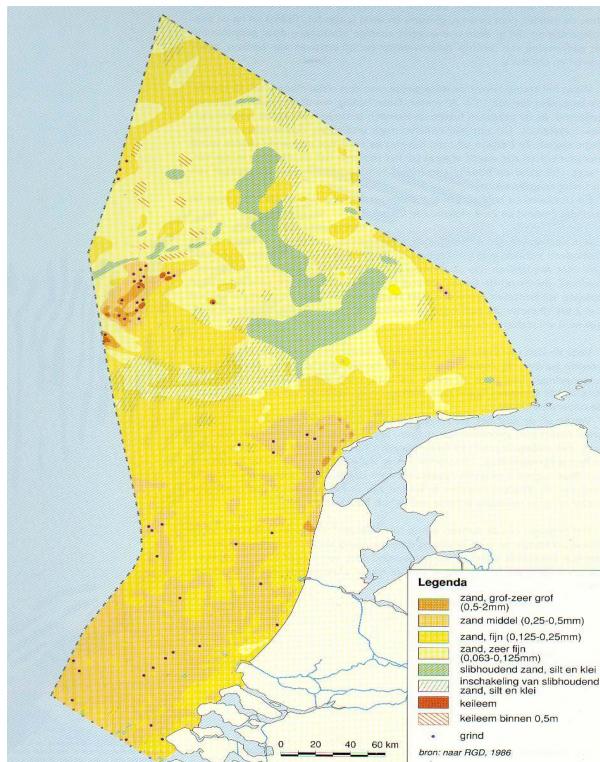

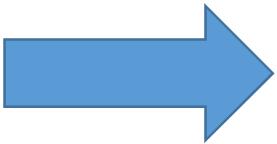

Climate change is a global problem with local
solutions.

The North Sea should be part of the solution by
creating space for harvesting renewable energy through

Veranderende Noordzee

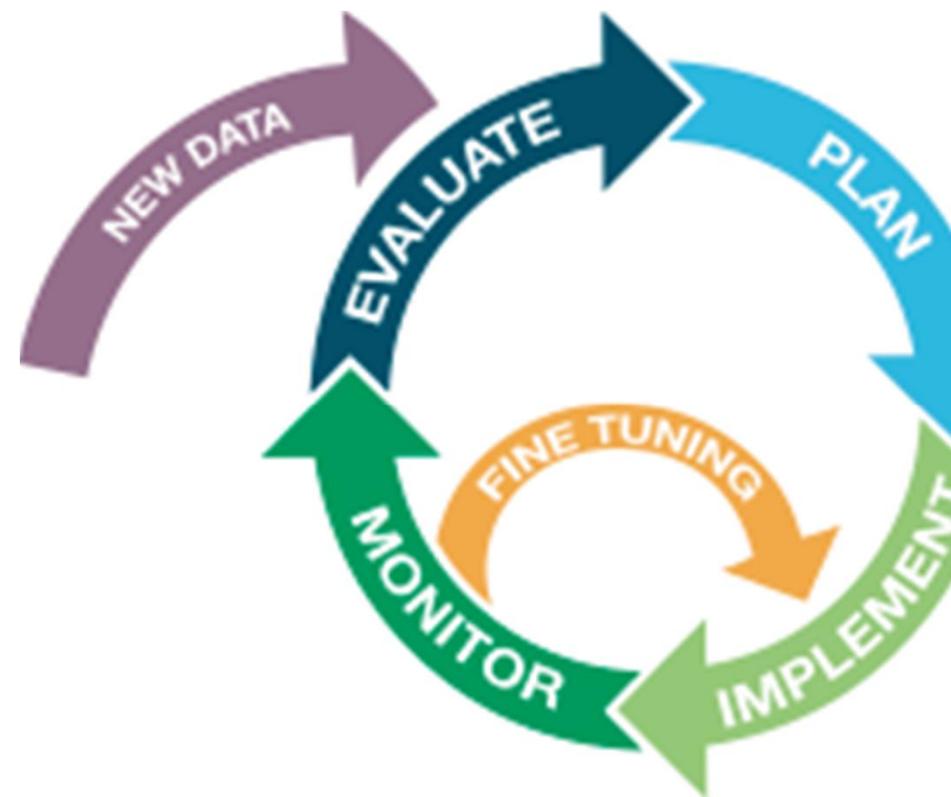

"large-scale development of offshore wind farms on the North Sea further accelerates the transition from a highly degraded seascape to a modified seascape."

Adaptive management

large-scale development of offshore wind farms will provide ranging impacts on the ecology of the North

commended to take a **step-by-step** approach, accompanied by a dedicated monitoring scheme that for adaptive management."

Voorzorgsbeginsel

knowledge base regarding the (cumulative) effects of large-scale offshore wind energy is limited.

more, the precautionary principle should be applied during the roll-out of offshore wind farms."

An ounce of prevention is worth a pound of cure

PEARLS OF WISDOM

Natuurbescherdingsrecht

der whether nature conservation law would allow large-scale development of wind farms at sea as set out in the Energetic Odyssey.

Applicable legal requirements will have to be taken into account."

Internationale samenwerking

e that negative ecological impacts of a future
Sea wind farm network are kept to a
um.

to international cooperation directed at spatial
planning and at improving research and monitoring

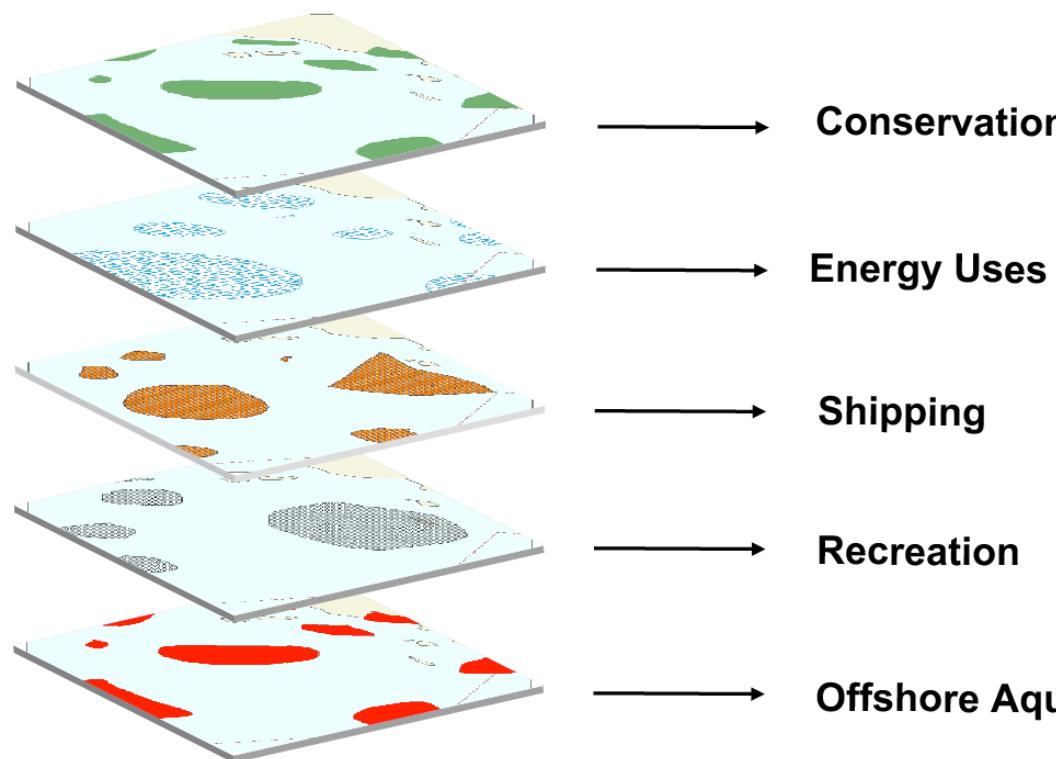

"

Ruimtelijke ordening

op large-scale offshore wind farms in a
e way, using an **integrated approach to**
the spatial planning.

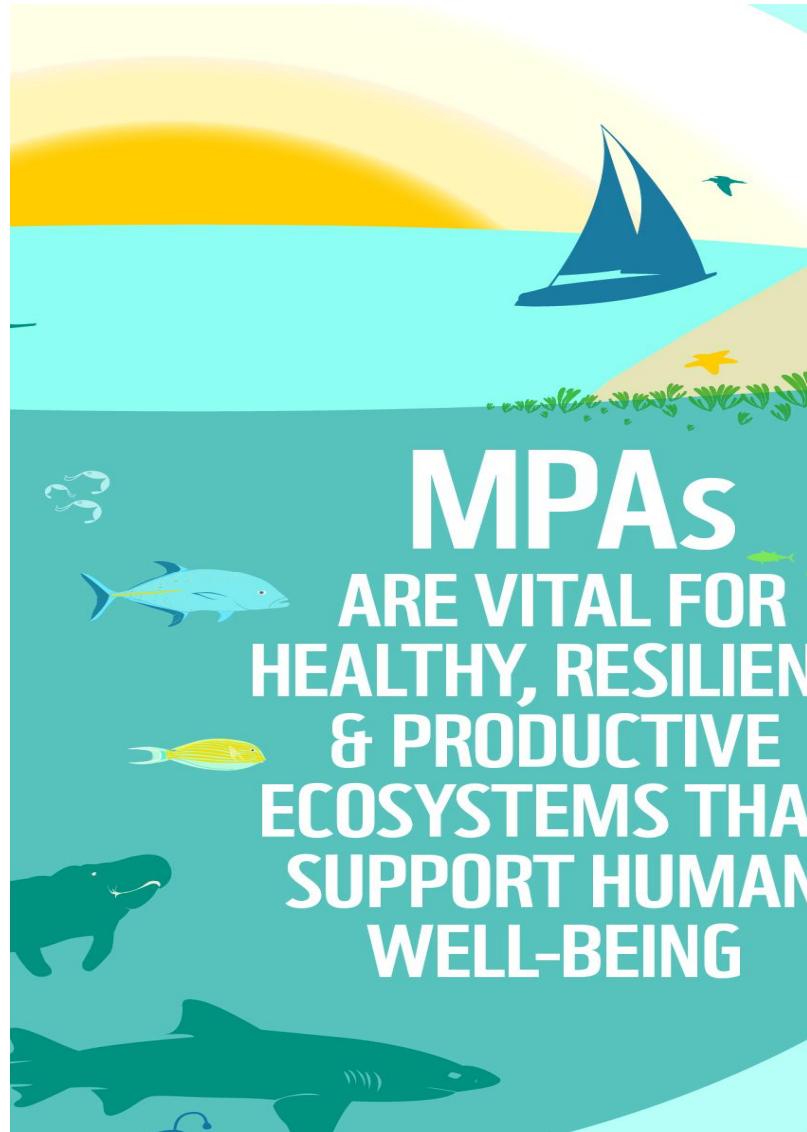

new spatial plan for the North Sea, all
es are awarded space based on ecological
s and need."

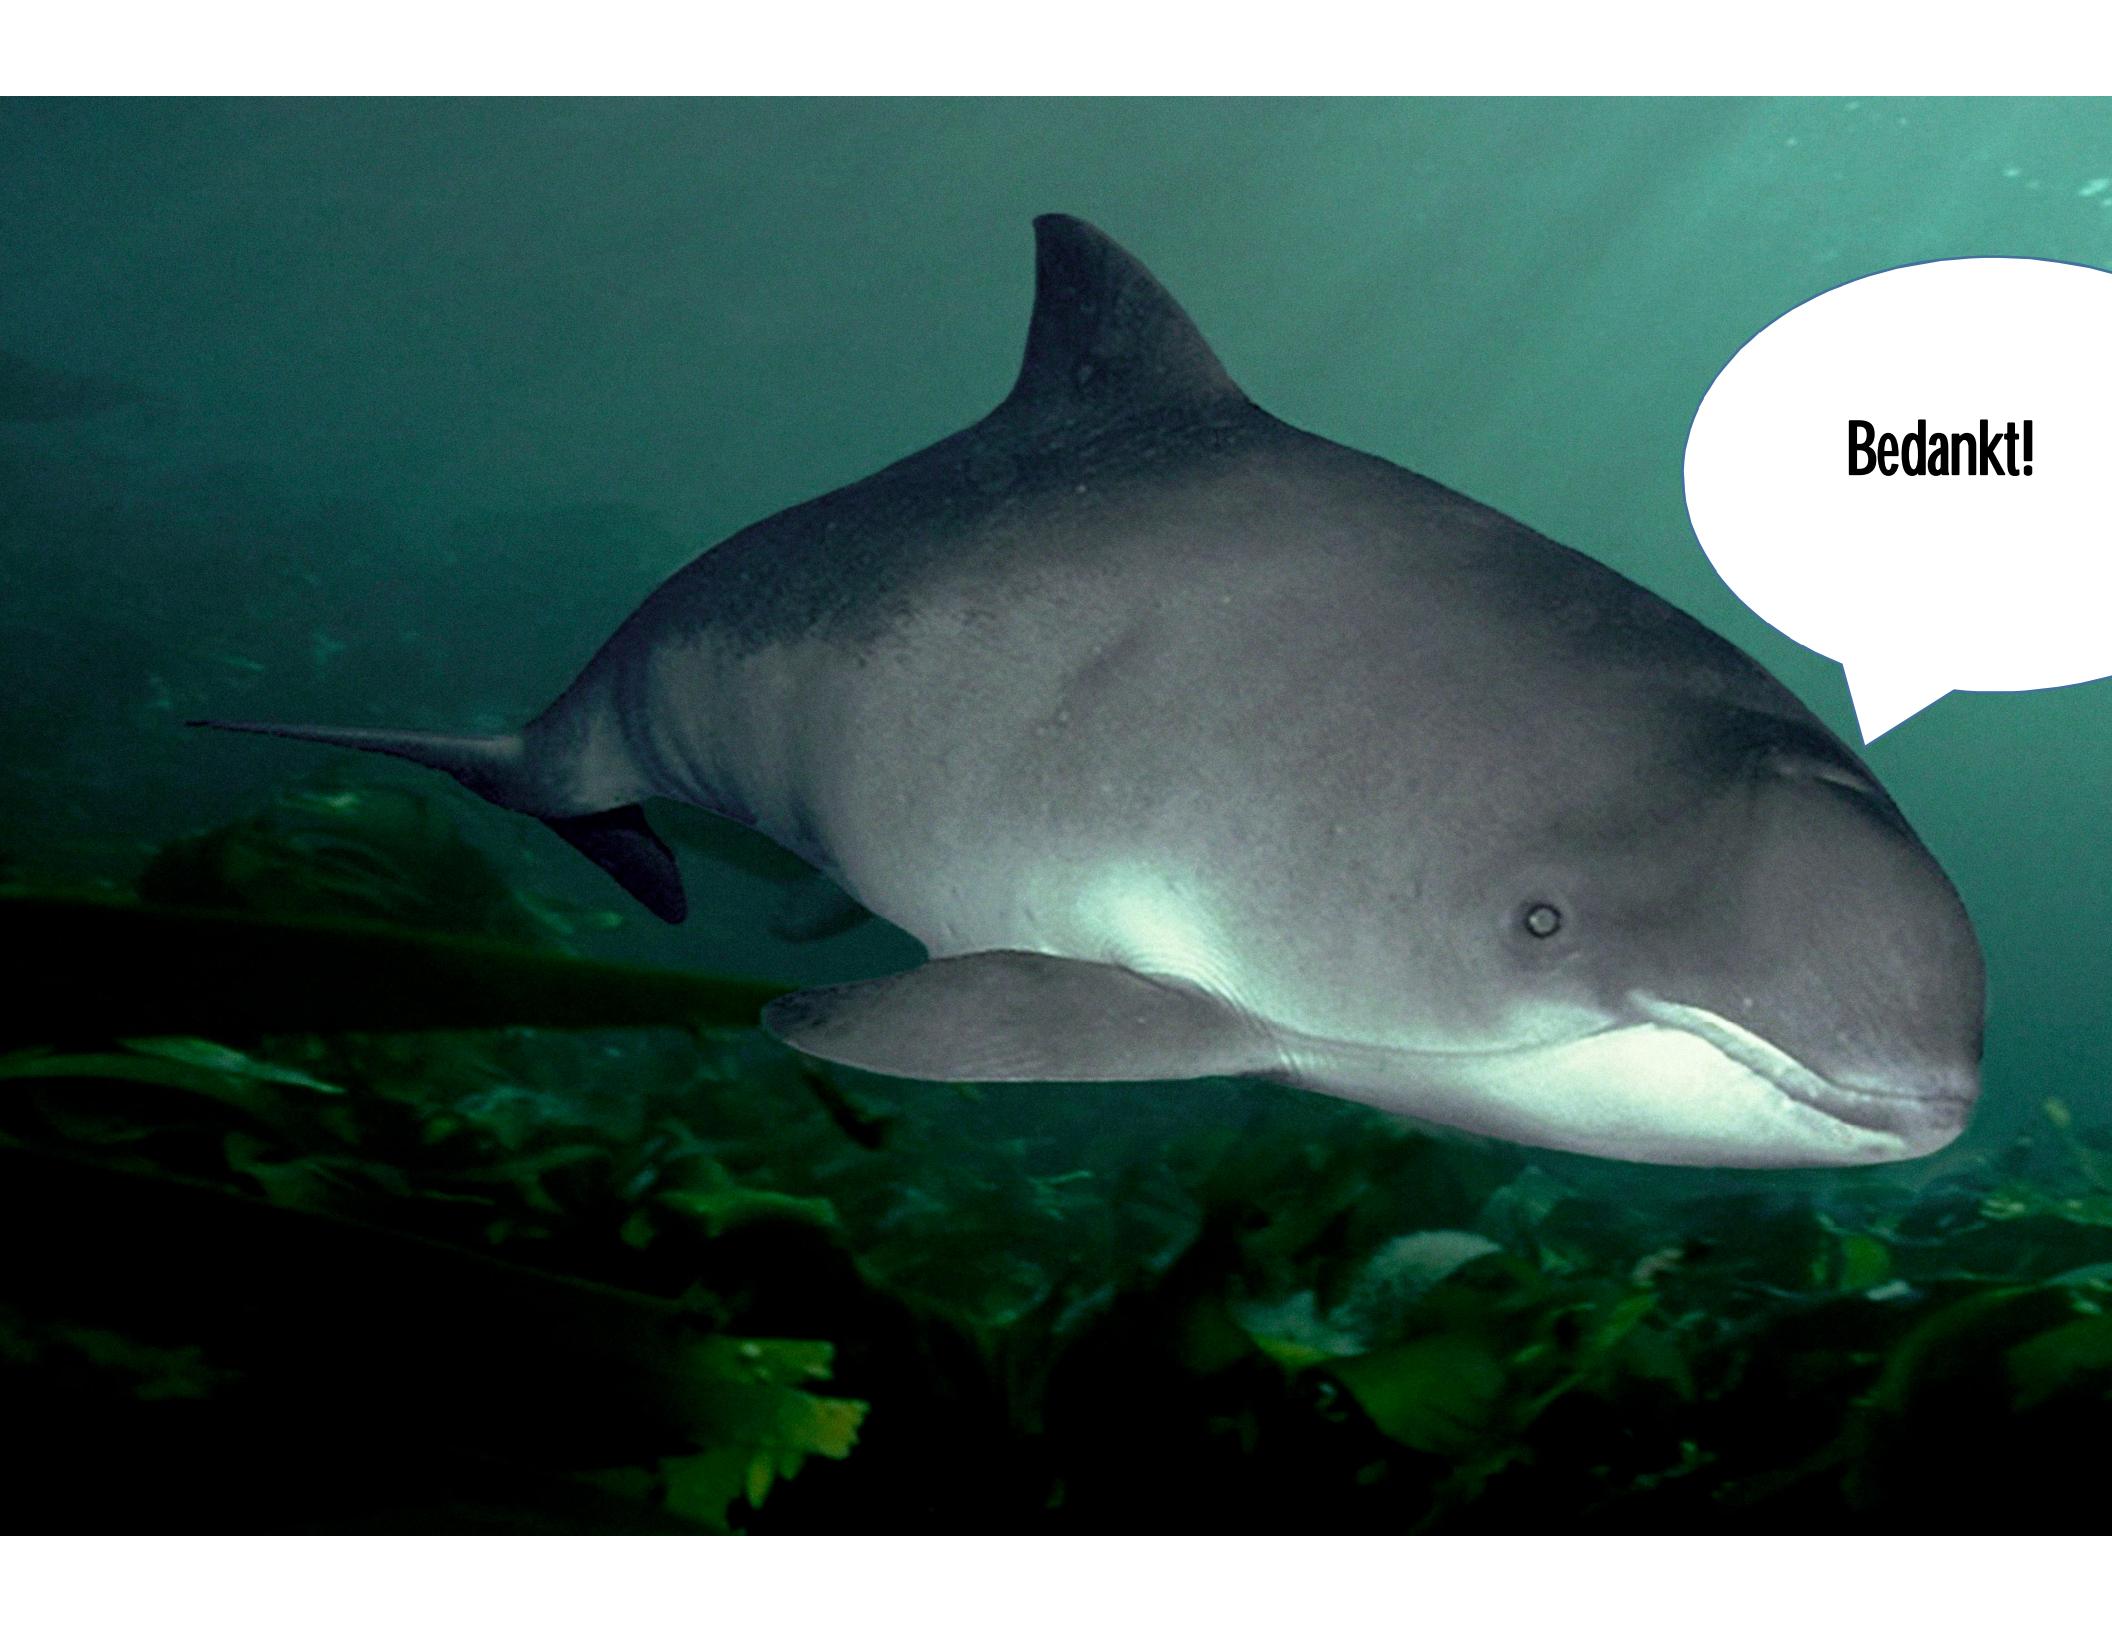

Beschermd gebieden

farms should not be conflated with Marine Protected Areas (MPAs).

ating and conserving MPAs as natural reference areas will remain necessary in the future."

Bedankt!
